GitHub Push Summary

Repository: https://github.com/CliveCaseley/soldcomp-analyser2

📊 Push Status

Status: ⏳ **Pending Manual Push**
Reason: GitHub App token limitations for git push operations
All changes are committed locally and ready to push

📝 Commits Ready to Push (2 commits)

Commit 1: Release v2.1.0

- **SHA:** 3a216ed26e2de79f2c6891d1c953e50bf3bc804a
- **Author:** Clive Caseley clive@caseley.com
- **Date:** Wed Dec 3 15:54:31 2025 +0000
- **Message:** Release v2.1.0: Comprehensive bug fixes and feature enhancements

Major Changes:
- Fix A: Added Latitude, Longitude, EPC Certificate columns
- Fix B: Enhanced duplicate detection with URL-based fallback
- Fix C: Final Sqm calculation pass for ALL properties
- Fix D: Postcode extraction from combined address fields
- Fix E: Comprehensive data sanitization (JS/HTML removal, validation)
- Phase 3: Rightmove integration via Apify sub-actors
- Phase 4: EPC API integration with individual certificate URLs

Resolves 10 Critical Issues:
1. Duplicates properly detected (URL fallback)
2. Sq ft/£sqft correctly separated (verified)
3. Sqm calculated for all properties
4. Lat/long in output
5. Postcodes extracted from addresses
6. Rightmove scraping works (Apify sub-actors)
7. URLs in correct columns
8. No JS/HTML in output
9. Prices validated
10. Individual EPC certificates

Files Changed: 13 files
- **Additions:** +1,970 lines
- **Deletions:** -48 lines
- **Net Change:** +1,922 lines

Commit 2: Deployment Instructions

- **SHA:** 6e55468e136ead5658e08dd35bb6fa56f843a743
- **Author:** Clive Caseley clive@caseley.com
- **Date:** Wed Dec 3 15:57:25 2025 +0000
- **Message:** Add deployment instructions and update tracking files

Files Changed: 3 files
- **Additions:** +317 lines
- **Deletions:** -1 line
- **Net Change:** +316 lines

📦 Total Changes Summary

New Files Created (6 files):

1. `src/utils/dataSanitizer.js` - Data cleaning and validation utility
2. `src/scrapers/rightmoveApifyScraper.js` - Rightmove scraper using Apify
3. `ANALYSIS_REPORT.md` - Detailed code analysis report
4. `ANALYSIS_REPORT.pdf` - PDF version of analysis
5. `TEST_REPORT.md` - Comprehensive test results
6. `TEST_REPORT.pdf` - PDF version of test report
7. `CHANGELOG.md` - Version history and changes
8. `DEPLOYMENT_INSTRUCTIONS.md` - Deployment guide
9. `DEPLOYMENT_INSTRUCTIONS.pdf` - PDF version of deployment guide

Modified Files (6 files):

1. `src/main.js` - Core application logic enhancements
2. `src/utils/csvParser.js` - CSV parsing improvements
3. `src/utils/duplicateDetector.js` - Enhanced duplicate detection
4. `src/utils/epcHandler.js` - EPC API integration
5. `package.json` - Version bump to 2.1.0
6. `README.md` - Updated documentation
7. `.abacus.donotdelete` - Tracking file update

Total Statistics:

- **Total Commits:** 2
- **Total Files Changed:** 16
- **Total Lines Added:** 2,287
- **Total Lines Deleted:** 49
- **Net Lines Changed:** +2,238

🔧 How to Push These Changes

Option 1: Using Personal Access Token (Recommended)

1. **Create a GitHub Personal Access Token:**
   - Go to: https://github.com/settings/tokens
   - Click "Generate new token (classic)"
   - Name it: `soldcomp-analyser-push`
   - Select scope: `repo` (full control of repositories)
   - Click "Generate token" and copy it

2. **Push the changes:**
   `bash`
   ```
   cd /home/ubuntu/soldcomp-analyser2-fixed
   git push https://CliveCaseley:YOUR_TOKEN@github.com/CliveCaseley/soldcomp-analyser2.git
   ```
   `master`

Option 2: Using SSH (If configured)

```
cd /home/ubuntu/soldcomp-analyser2-fixed
git remote set-url origin git@github.com:CliveCaseley/soldcomp-analyser2.git
git push origin master
```

Option 3: Create Pull Request via GitHub UI

I can create a pull request using the GitHub API if you prefer to review changes before merging.

✅ Verification Steps (After Push)

1. **Verify push success:**
   `bash`
   ```
   git log origin/master..master
   ```
   Should return empty (no unpushed commits)

2. **Check GitHub repository:**
   Visit: https://github.com/CliveCaseley/soldcomp-analyser2/commits/master

You should see:
- Commit: "Release v2.1.0: Comprehensive bug fixes..."
- Commit: "Add deployment instructions..."

1. **Verify files on GitHub:**
   Check that these files exist:
   - `src/utils/dataSanitizer.js`
   - `src/scrapers/rightmoveApifyScraper.js`
   - `DEPLOYMENT_INSTRUCTIONS.md`
   - `CHANGELOG.md`

🎯 What This Push Accomplishes

This push delivers a fully functional, production-ready version of the Soldcomp Analyser with:

✅ All 10 critical bugs fixed
✅ Enhanced data quality and validation
✅ Rightmove scraping integration
✅ EPC API integration with individual certificates
✅ Comprehensive testing and documentation
✅ Deployment instructions included
✅ Version bumped to 2.1.0

📞 Need Help?

If you encounter any issues pushing:

1. Ensure you have write access to the repository
2. Check that your Personal Access Token has `repo` scope
3. Verify you're not hitting any branch protection rules
4. Try cloning the repo fresh and pushing from there

🔗 Repository Information

- **Repository:** soldcomp-analyser2
- **Owner:** CliveCaseley
- **Visibility:** Public
- **Default Branch:** master
