How to Push Your Changes to GitHub

Current Status

- All code fixes have been committed locally
- 2 commits are ready to be pushed to master branch
- Remote is configured: https://github.com/CliveCaseley/soldcomp-analyser2.git

Recommended: Create GitHub Personal Access Token

To push changes, you'll need to authenticate with GitHub. Here's how:

1. Go to GitHub Settings → Developer settings → Personal access tokens → Tokens (classic)
2. Click "Generate new token (classic)"
3. Give it a name like "soldcomp-analyser-push"
4. Select scopes: `repo` (full control of private repositories)
5. Generate and copy the token

Then push using:

```
cd /home/ubuntu/soldcomp-analyser2-fixed
git push https://YOUR_GITHUB_USERNAME:YOUR_TOKEN@github.com/CliveCaseley/soldcomp-ana-
lyser2.git master
```

What Will Be Pushed

Commits Ready to Push:

1. **3a216ed** - Release v2.1.0: Comprehensive bug fixes and feature enhancements
2. **6e55468** - Add deployment instructions and update tracking files

Summary of Changes:

See detailed commit information below.
